Note : This abridged life table is constructed from the estimated population in 2007, 2008 and 2009 and the total number of deaths registered in these years. The column headed l_x shows the numbers who would survive to the exact age of x , out of 100,000 persons who, from birth, were subject to the mortality probabilities indicated by the death records for 2007-2009. Column e_x^o shows the expectation of life, that is, the average number of years of life left to persons aged exactly x who are subject to the 2007-2009 mortality probabilities from age x onwards.
