Note:

This abridged life table is constructed from the estimated population in 2015, 2016 and 2017 and the total number of deaths registered in these years. The column headed l_x shows the numbers who would survive to the exact age of x out of 100,000 persons who, from birth, were subject to the mortality probabilities indicated by the death records for 2015-2017. Column e_x^o shows the expectation of life, that is, the average number of years of life left to persons aged exactly x who are subject to the 2015-2017 mortality probabilities from age x onwards.

Footnote:

1) Please note that the Scotland-level life expectancy estimate shown here is for use only as a comparator for the corresponding sub-Scotland-level figures. The definitive Scotland-level life expectancy estimate (based on national life tables) is published by NRS, which can be found in the [National Life Tables](#) section of the NRS website.
