YEAR:

Life table is a tabular presentation of the intensity of dying and

its distribution by age. The calculated values are comparable in time and space.

Number of persons surviving (l_x):

The number of persons surviving (l_x) is the number of survivors at each birthday out of 100,000 live births.

Total number of person - years (T_x):

The total number of person years (T_x) is the total number of years lived from age x to death.

Life expectancy (e_x):

Life expectancy (e_x) is the average number of years a person aged x years can expect to live assuming that mortality rates by age will remain unchanged since the year of observation.
